

OPERATION: UNLOAD THE DUCKS

Classification: TOP SECRET | Author: Y. Crow | Rev. 3

1. EXECUTIVE SUMMARY

This document outlines the full operational plan for the procurement, transportation, and coordinated release of approximately one million (1,000,000) domestic ducks onto the grounds of the Apples Institution. The objective is to exploit the well-documented susceptibility of fully-grown adults to the presence of waterfowl, thereby inducing widespread distraction and campus-wide disruption. Total projected budget: \$3.00 (USD).

2. PHASE BREAKDOWN

Phase 1 — Acquisition. Contact DuckCo LLC via the encrypted channel. Negotiate bulk pricing. Do NOT use personal email. Target procurement cost: \$0.000003 per duck. Delivery method: unmarked transit vans, route via the old mill road.

Phase 2 — Staging. Hold ducks at the safe house (Raven's barn, north paddock). Feed regimen: standard cracked corn, 0.5 kg per hundred ducks per day. Magpie is responsible for daily head-counts. Any losses to be logged in LOSSES.TXT.

Phase 3 — Infiltration. At 07:45 hrs on the designated date, Jackdaw's team will disable the Apples Institution perimeter cameras using the standard RF jammer (Model: Quacker-3000). Convoy departs staging at 07:50 hrs.

Phase 4 — Release. Gates open at 08:00 hrs sharp. All vans unload simultaneously at Grid References A-3, B-7, and C-1. Ducks are to be released facing the main quad. Do NOT release near the koi pond — we need those.

Phase 5 — Exfiltration. Operatives disperse individually. Rendezvous point: the usual cafe. Destroy all printed copies of this document after memorisation. Digital copies to be deleted immediately after the operation is confirmed live.

3. RISK ASSESSMENT

Primary risk: SUDO (Supreme Universal Duck Organisation) surveillance. SUDO has been escalating monitoring activity in the region. All communications must be conducted via the agreed codebook. This file must NOT remain on any device after the operation date. Delete immediately.
